Strong solution

For tourism school specifically but also primary schools, secondary schools, MBO's, HBO's and universities , we offer a unique solution. In addition to a user-friendly portal, the user-friendly CMS (with which you can easily convert content into structured, online modules yourself) and user-friendly visually attractive training courses, we offer the education sector a number of unique extras which you find here below:

Our solution includes:

a recognisable elearning portal that we produce for you, in your colours, look & feel and appearance

the possibility for students to register directly in the correct group, class and year upon registration. You are able to assign modules per class

more than 200 free tourism modules about countries, regions and cities.

various free skills modules for students such as "safe online", "social media wisdom", "selling like this", "applying for a job", "cyberbullying" and various hospitality training courses such as "hospitality" and "how to receive international guests".

several free informative modules for your teachers such as "the adolescent brain", "safe online", "social media wisdom", "digital education" and "listening".

a quiz module that can be used to compile attractive knowledge quizzes. A motivating ranking list is maintained based on the participants' names and e-mail addresses.

Creative, Effective, Interactive

With the ETraining Dashboard, we are able to offer you a well thought-out and user-friendly e-learning portal. With the help of sophisticated tools, we create an entirely personalised learning website for your school or institute , in which you can indicate exactly what groups and classes you like to add. Through simple and clear navigation, the processing time to get to know the program is not more than 2 minutes. An important factor! After all, you want to inform not irritate! your target groups.

In addition, with our technology you have a method that is not only efficient but also proven effective. Users are actively involved in the modules. Not just by answering a simple multiple choice question now and then, but by having them click, drag and drop, think about statements and ask them to solve (fun!) questions. The modules also have a strong visual appeal. No books online, no overkill of information, but learning in a way that is appealing and effective.

Would you like to know more about our product, the possibilities and extras? Download [our whitepaper](#) with all the benefits of ETraining Dashboard.
